PROFESSIONAL EXPERIENCE

ConstructConnect, Cincinnati, Ohio (Remote)

Software Engineer II | *ConstructConnect Platform*

- Cut p99 search latency **~9.4s → ~1.4s** (p95 **~250ms**) on the flagship search API cross-search rollout, validated with **220k-request** load campaigns at up to **8× production peak, zero 5xx errors**
- Own event-driven ingestion pipelines (**C#, Python, Logstash**) keeping a **360k+** project search corpus fresh on **30-minute delta cycles** across seven pipelines, serving **75,000+** customers
- Operate a multi-tier (hot/warm/cold) production **Elasticsearch** deployment (**~7TB**), shipping to prod multiple times per month behind security scans and rollback plans

Software Engineer I | *ConstructConnect Modernized Search*

- Built a modern **React/Next.js (TypeScript)** document viewer with **Python** backend — cut per-page renders **~5–10×** (to **~0.2s/page**) on docs up to **1,100 pages** and backend API p95 **~384ms → ~138ms (-64%)**
- Partnered with **Quality Engineering** to make **k6/pytest** performance suites a release gate — serving **~100k document-project loads per day**

Associate Software Engineer

- Co-designed the **cloud-native document processing pipeline** that now carries **100% of document traffic** (**~291k packages, 75M+ pages** annually), fully replacing the legacy OCR stack
- Cut package resubmission from **21.5% to under 1%** (**~96% less manual intervention**), sustaining **~350k pages/day**; built the **Node.js (TypeScript) microservices** on **Cloud Functions** that run it

Data Science Intern | *ConstructConnect Takeoff Boost*

- Prototyped multiple **Python ML models** (object detection, image segmentation, image classification, text classification) to explore new production capabilities using construction documents and project data.
- This would turn into Takeoff Boost the **leading AI takeoff product** in the construction software industry.

EDUCATION

College of Charleston, Charleston, SC

Master of Science Computer and Information Sciences (Software Engineering) | GPA: 3.9

Vassar College, Poughkeepsie, NY

Bachelor of Arts Computer Science; Economics Minor | GPA: 3.7

PROJECTS

Family Recipe App | *Family Recipe GitHub*

- Shipped a full-stack recipe-sharing web app as a production system: CI/CD, IaC, observability, app security.
- Tech: Next.js frontend, Python API on Cloud Run, Cloud SQL Postgres, GCS uploads, GitHub Actions CI/CD (security + unit/e2e gates), Terraform

DevX AI Enablement, *Claude Code*

- Member of the org AI Center of Excellence, building AI agents, skills, and hooks that assist developers across the full software development lifecycle.
- Built an agentic workflow taking agents from a JIRA ticket to code changes, docs, a merge request, and a testing plan; adopted by **~3 in 4 product engineers weekly** with a **~98% suggestion-acceptance rate**.

Soccer Data Pipeline | *Soccer Data Pipeline GitLab*

- Shipped a ETL pipeline that transforms raw soccer data into a Postgres SQL database consumable by APIs.
- Designed a series of Serverless Functions that could ingest data in real time and transform into valuable insights.
- Tech: Python, Terraform, Postgres, Google Cloud (Functions, SQL, Scheduler, Pub/Sub, etc.), GitLab

Student Service Center | *Student Service Center GitHub*

- Worked in a small, startup-style team to build a full-stack web app that centralizes key university student services.
- Ran user interviews and usability tests with students; used Figma and Vercel v0 to quickly iterate on UI flows.
- Tech: NextJs, React, SQLite, Vercel, Figma, GitHub
